

Data Boot Camp Lesson 7.1

## **Class Objectives**

By the end of today's class you will be able to:

Articulate the requirements for Project 1.

Draw and interpret diagrams of Git branching workflows.

Create new branches with Git.

Push local branches to GitHub.

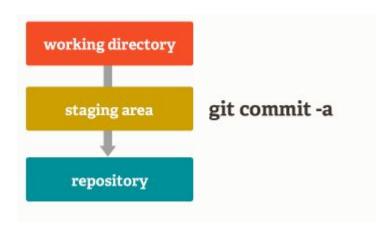

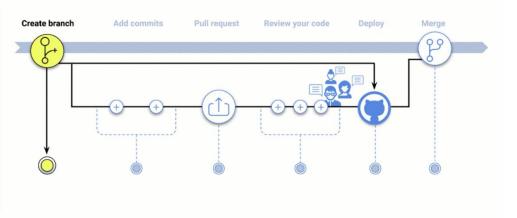

Instructor Demonstration Intro to Git

# What is Git? Intro to Git

 Git is a distributed version-control system for tracking changes in source code during software development.

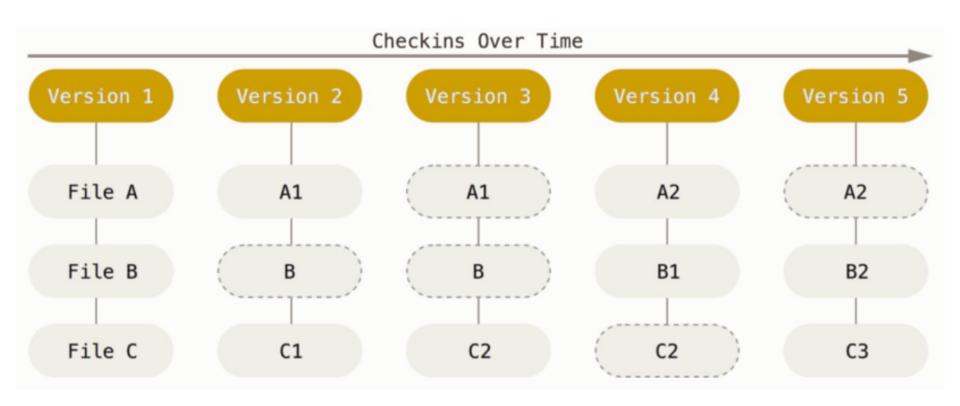

#### Intro to Git Project!

- Scenario: Your group has been working with Uber's rider data, and you decided to analyze the average age of the riders:
  - Git essentially allows us to write this code, and save it with the name: age\_analysis.
  - The code in age\_analysis differ from the root code.
  - The root code for the project is called main.
  - age\_analysis is a branch originated from the main branch. It contains updates that will be added to the main branch when it's ready to merge.

#### Intro to Gitot model"

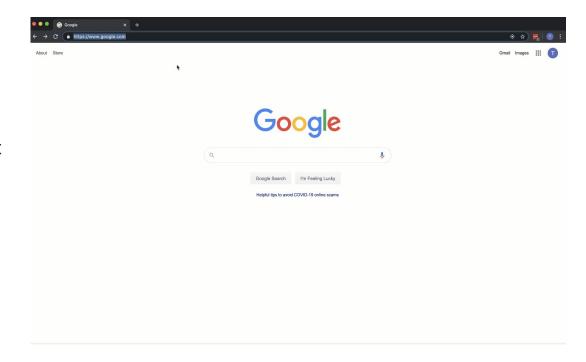

## **Activity: Creating a Project Repo**

In this activity, everyone will set up a GitHub repository that we can use for our projects.

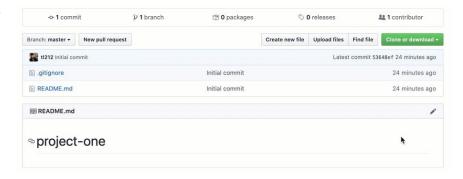

### Activity: Greating at Rroject: Repo

- Nominate one of your group member to create the Project Repository.
- Go to GitHub and do the following:
  - Click on the plus sign next to your profile picture.
  - Click on 'New Repository'.
  - o **Initialize with** .gitignore.
  - Choose Python in the gitignore dropdown.

### Activity: Greating and Broject Repo

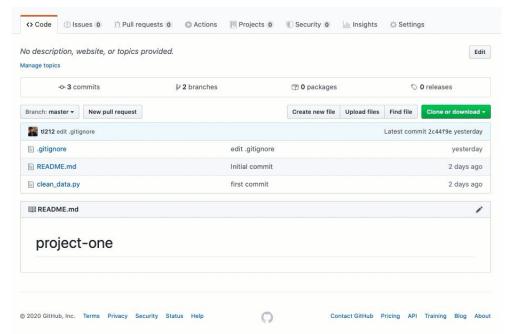

- Slack the remote URL to your team members.
- git clone the repository.
  - Once in the repo page click 'Clone or download' and copy.
  - Open Terminal and git clone

## Activity: © reating di Project Repo

- In your Project Repo page click on the "Settings" tab.
  - Click on "Manage access" on the left panel.
  - Click on 'Invite collaborator".
  - Type in your college GitHub username and click add.

# **Activity: Workflows**

In this activity, you will take a few minutes to review the concepts we have learned.

# **Activity** on Workflows

- This is a diagramming exercise. You can either draw your solutions on paper, or use the interface provided at Git Viz.
- Check your slack for: Activities/02-Stu\_Workflows/README.md or open directly from your students repo.

Time's Up! Let's Review.

## **Activity: Creating Branches**

In this activity, everyone will review how to create a branch in GitHub.

## Activity: Greating Branches

To create a new, isolated development history, we must create branches.

 Alternatively, we can create a branch and then switch to it as two separate steps, though this is uncommon.

## **Activity: Pushing to GitHub**

In this activity, everyone will review how to push a commit in GitHub.

# Activity & Rushing to GitHub

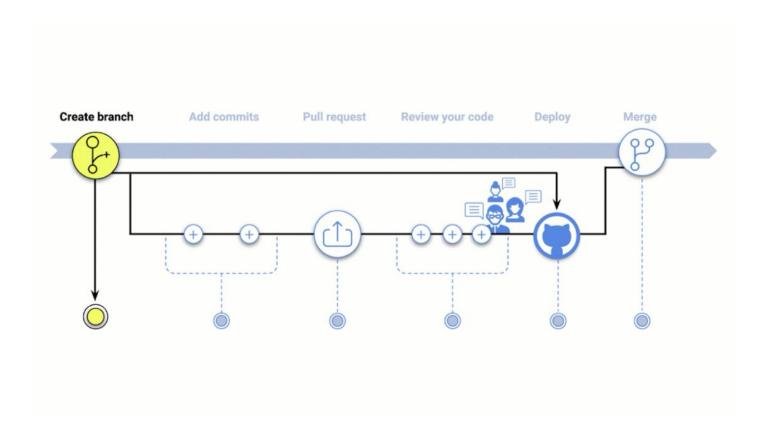

# **Activity:** Pushing to GitHub

Instructor Demonstration Recap Workflow & Share References

# **Recap Workflow & Share Preferences**

Instructor Demonstration Introduce Projects

## **Project Week! (This Week)**

#### **Day 1:**

Form Groups

**Outline Project Ideas** 

**Initial Data Exploration** 

Begin Research of Datasets

Submit Project Proposal for Approval

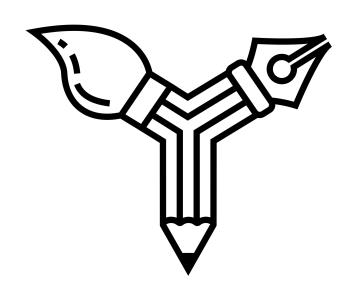

**Hardcore Development** 

Hardcore Development

# **Project Week! (Next Week)**

#### **Day 4:**

**Hardcore Development** 

#### **Day 5:**

**Hardcore Development** 

**Presentation Prep** 

#### Day 6:

**Presentations** 

# Time to divide into teams!

# **Project Requirements**

#### **Development Requirements**

Use Pandas to clean and format your dataset(s).

Create a Jupyter Notebook **describing the data exploration and cleanup** process.

Create a Jupyter Notebook illustrating the final data analysis.

Use Matplotlib to create a total of 6-8 visualizations of your data (ideally, at least 2 per "question" you ask of your data).

Save PNG images of your visualizations to distribute to the class and instructional team, and for inclusion in your presentation.

(Optional) Use at least one API, if you can find an API with data pertinent to your primary research questions.

Create a write-up summarizing your major findings. This should include a heading for each "question" you asked of your data and a short description of your findings and any relevant plots.

### **Presentation Requirements**

You will also be responsible for preparing a formal, 10-minute presentation that covers:

Questions you found interesting and what motivated you to answer them

Where and how you found the data you used to answer these questions

The data exploration and cleanup process (accompanied by your Jupyter Notebook)

The analysis process (accompanied by your Jupyter Notebook)

Your conclusions including a numerical summary and visualizations of the summary

The implications of your findings: what do your findings mean?

# **Suggested Data Sources**

#### **Suggestions for Data Sources**

Feel free to ask us (the instructional staff) for input, but our general advice is to stick to data sources that:

Are sufficiently large.

Have a consistent format.

Ideally, contain more data than needed.

Are well-documented.

# **Example Project Ideas**

#### **Private Investigator**

01

Use aggregate crime data from different police precincts in a city to uncover patterns in criminal activity.

02

Most crime in NYC takes place in the summer.

Can you uncover similar patterns in your city?

03

What do your results suggest about how police should plan their patrols?

What do your results suggest about how best to distribute law enforcement resources over the calendar year?

www.nydailynews.com

#### **Uber Rides and Weather**

01

No one likes to walk in subzero temperatures *or* scorching heat. Do people use Uber more when the weather is uncomfortable?

02

Using <u>Uber ride data</u> from <u>Kaggle</u> and data from a weather API, find out if people take Uber more during summer and winter, and if there are relationships between daily temperature and ride frequency.

03

What do the results tell you about surge pricing strategies and commuter habits?

www.kagale.com 33

### **Bullying and Crime Rates**

01

Bullying and violent crime seem like they should be related. Can we find a correlation between frequency of bullying and rates of violent crime?

02

Using <u>Data.gov's data on</u> <u>bullying</u> and data from police districts of your choice, investigate relationships between bullying and violent crime frequency and location (zip code, city, etc.).

03

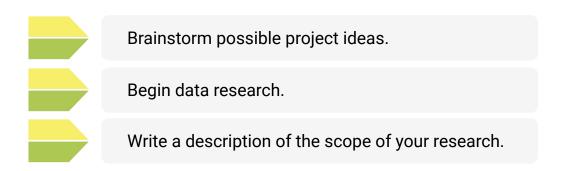

Are these two activities correlated?

What do the results suggest about society and public policy?

www.data.gov

#### By the End of Today's Class:

#### Create a short, 1-page project proposal that covers the following:
